Quality Systems

- ▶ Fabrics and Accessories are inspected based on Four Point System.
 - ▶ Spread check, cut panel check, inspection in cutting.
 - ▶ In sewing process are 100 % checked by “In line checkers” & by “End Line checkers”.
 - ▶ Roaming Q.C. conducts skip bundle check based on AQL 2.5.
 - ▶ In finishing 100 % garments are checked from inside and after iron 100 % garments are checked with 100 % measurement of critical specs. Metal detection is done and all the cartons packed inside metal free zone. (as required)
-
- Random inspections of packed goods are done on AQL 2.5 every 2 hrs.

Ethically approved/Nominated

- BSCI
- SEDEX
- GOTS & OCS

REMEDATION ON STRUCTURAL, ELECTRICAL & FIRE

Achieved 100%, Assessed by COMPLIANCE

Sampling

- In house sampling for all the product categories.
- Better follow up and coordination.
- Faster turn around of samples.

Needle Control System

Most effective needle control system is followed in the factory to avoid missing needle packed with the garment, no needle is issued to operator till all the broken parts are found, even if not found hand held metal detectors & metal detector machine is used, even if not found then that bundle is destroyed and proper records are kept.

Uninterrupted Power Supply

We have 120 KW Gas/Diesel based power generators, provides the secondary source of power for the entire complex.

Thank You
